

Numbers from papers, ready to chart.

Pull tables and results out of PDFs, check them against the page, and plot them next to your own work.

THE PROBLEM

Results are stuck in PDFs.

To compare your work with a paper, you retype its table into a spreadsheet. It's slow, and one typo quietly changes your chart.

Table 1 · p. 1

results.xlsx

System	Dev F1	Test F1
BERT-B	85.8	87.0
BERT-L	90.9	91.8

The paper says 88.5. Nothing warns you, and nothing links back.

1 • CAPTURE A TABLE

Draw a box around any table.

Turn on Capture table in the reader and drag over the page. PaperLab reads what's inside.

2 • CHECK THE GRID

Fix what it read wrong, next to the page.

The grid sits beside the crop of the page. Every cell you fix stays marked, so you can tell your edits from what was read.

The page

System	Dev F1	Test F1
BERT-B	88.5	87.0
BERT-L	90.9	91.8

System	Dev F1	Test F1
BERT-B	88.5	87.0
BERT-L	90.9	91.8

You fixed it. It was read as “86.5”.

p. 1 • 2 rows × 3 columns

Save table

3 • KEEP A NUMBER

Or select a single result in the text.

Select “88.5 ± 0.3” and keep its value, error and unit, with its exact spot on the page.

On the dev set, our best model trains in four days and reaches an F1 of **88.5 ± 0.3**.

Add as number

Label

Best model, dev F1

Value

88.5

± error

0.3

Unit

F1

p. 4

Save

4 · ADD YOUR DATA

Bring your own runs.

Type a table, paste it from a spreadsheet, or upload a CSV.
It's a dataset like any other, just without a paper.

New dataset

Dataset name

my-runs

TypePasteUpload CSV

 my-runs.csv2 rows × 3 columns

run	F1	error
Run A	89.7	0.5
Run B	91.6	0.4

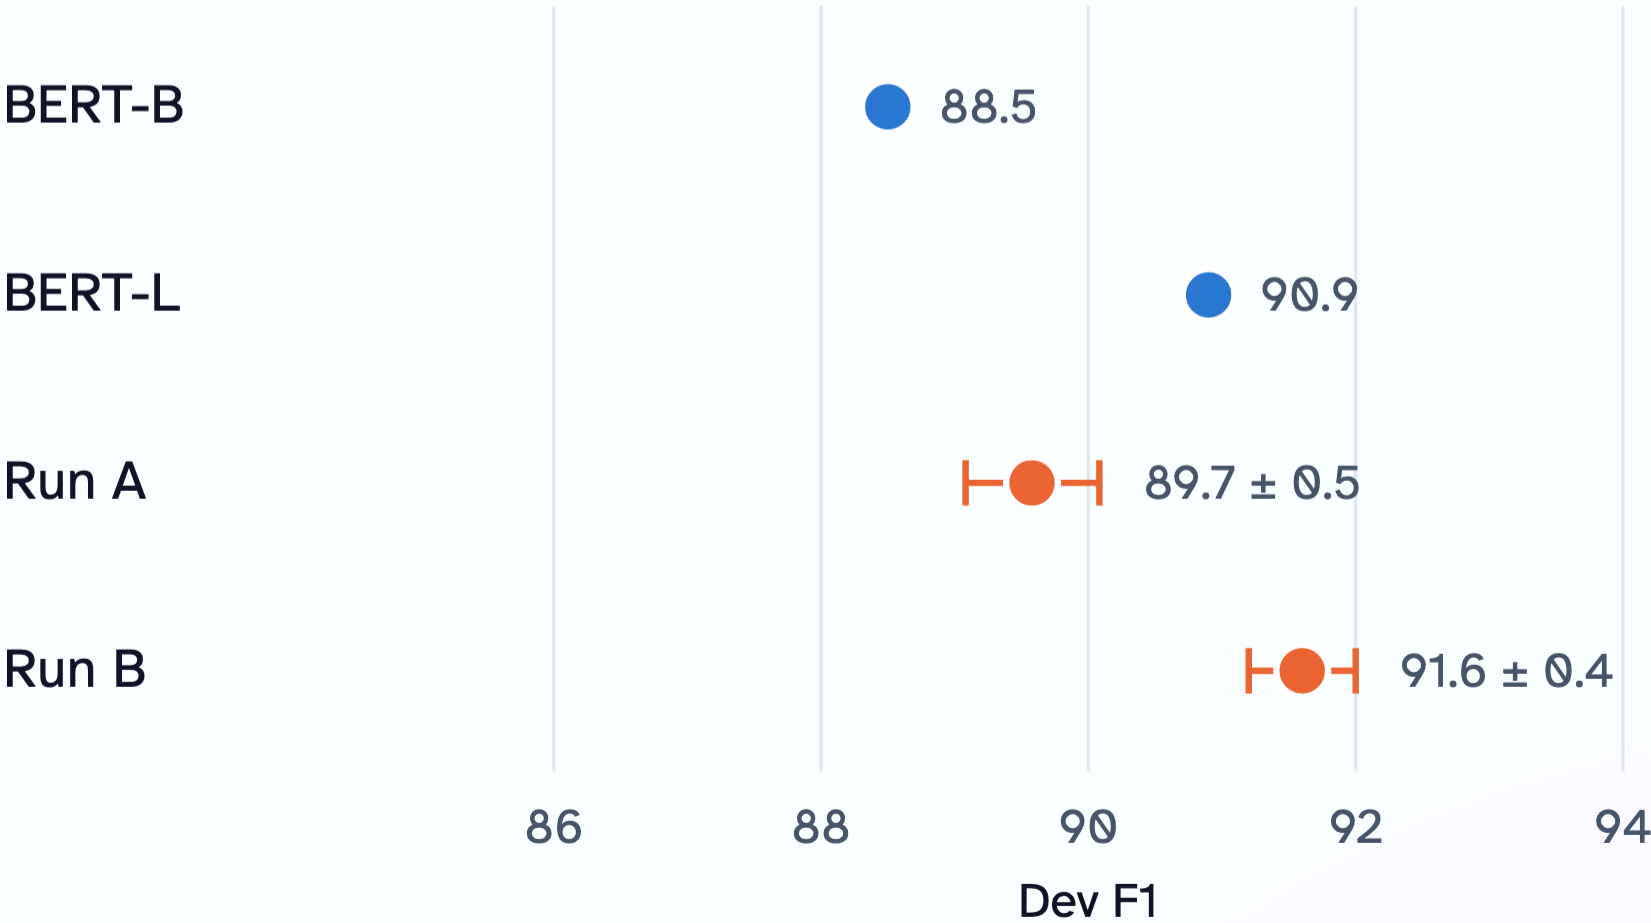

5 · CHART IT

Your results, next to the paper's.

Mix series from any paper and your own data in one chart, with error bars, across 9 chart types.

Dev F1: BERT vs my runs

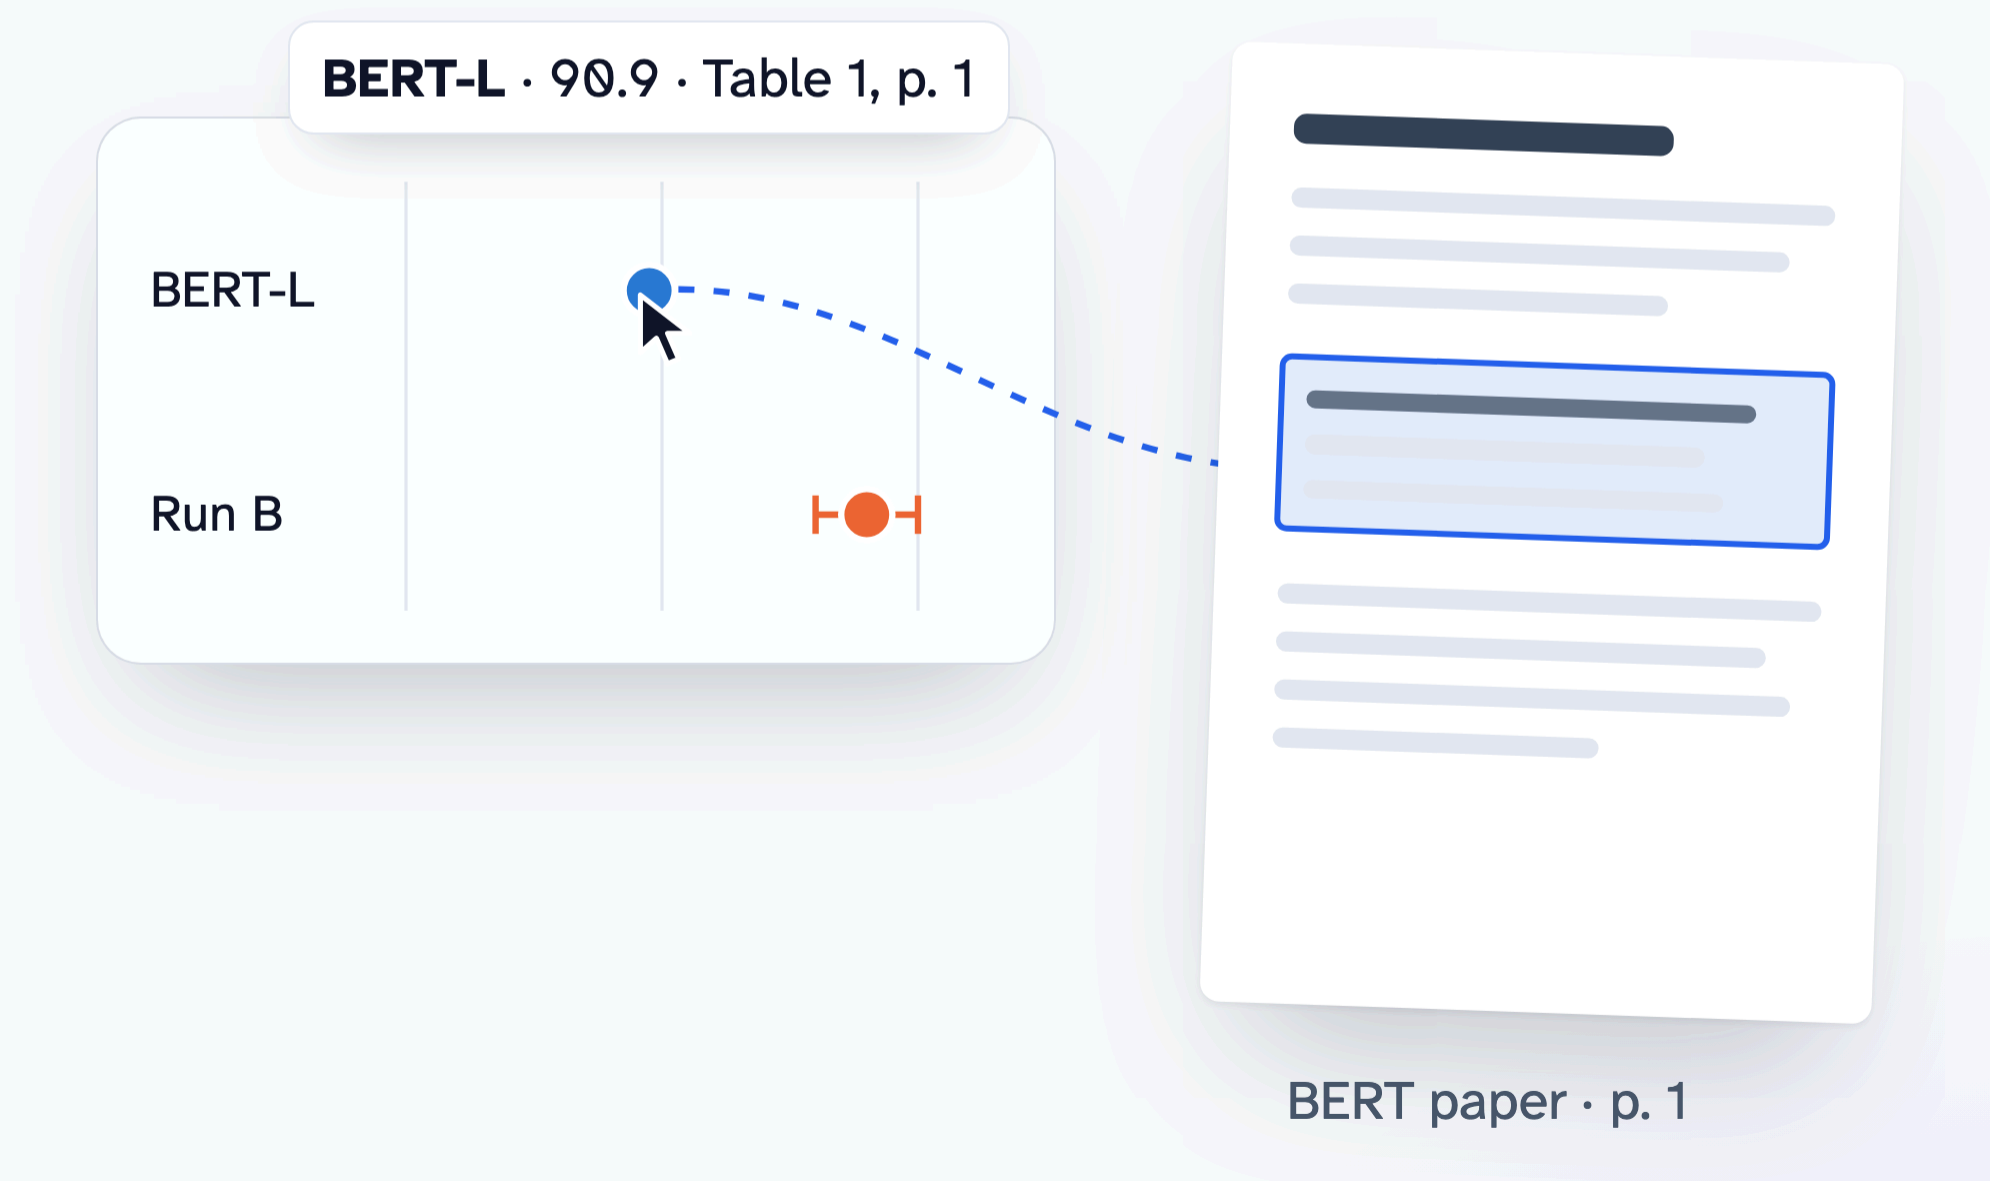

● Table 1 · BERT paper ● my-runs.csv

6 • CHECK THE SOURCE

Click a point. Land on its page.

Every point from a paper opens the reader at the page it came from, with its table outlined.

Read deeper. Keep every thought. Chart the numbers.

PaperLab runs on your own machine. Your PDFs, notes and data stay on your computer.
