

Choose the model behind every answer.

Run a local model with Ollama, use Anthropic with your own key, or connect any OpenAI-compatible server.

What method do they use?

BERT masks 15% of its tokens and learns to predict them **[C1]**.

Swipe →

1 • ADD A CONNECTION

Connect a server in Settings.

Pick Ollama, Anthropic or an OpenAI-compatible server. Presets fill in the address for the common ones.

Add connection

2 • TEST IT

Test it. Your key is saved on your machine.

Test asks the server for its models. PaperLab shows only its last four characters, never the full key.

OpenRouter

3 · CHOOSE MODELS

Choose what chat lists, and the default.

Add models from the server's own list, or type a name. The default is used until you pick another.

Anthropic

4 · PULL WITH OLLAMA

Download a local model without a terminal.

Type a name and press Pull. The download shows live, then the model joins chat. Delete one from disk just as easily.

5 • ASK

Pick a model for each question.

A local model keeps your papers and notes on your computer. A model tagged Cloud receives the passages and notes sent with each question.

What are the limitations?

Manage models...

6 • SEE WHO ANSWERED

Every answer names the model that wrote it.

Hover the AI mark to see its model and connection.
Renaming a connection later won't change it.

What are the limitations?

The authors note that masking creates a mismatch between pre-training and fine-tuning [C1], and that the model converges more slowly [C2].
